### **DETAILED ACTION**

# **Drawings**

Figures 1a and 1b, corresponding to "Art Background" in the specification, should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by 6,256,495 to Francisco et al, hereafter Francisco.

For claim 1, Francisco discloses a filter comprising a signal input; a control input; first and second inductor banks; and a [bridge] switching circuit, alternating port connections to permit use of multiple frequency bands. Claim 2 restates the apparatus limitations of claim 1 in method format.

Art Unit: 2819

#### Conclusion

Page 3

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,538,521 to Kobayashi et al defines high and low frequency bands by means of inductors in an LC resonator circuit. U.S. Patent 6,275,113 to Nakano et al uses first and second inductors [21 / 22] to define low and U.S. Patent 4,598,423 to Hettiger shows a multiband tuner high frequency bands. having plural inductors. U.S. Patent 4,456,895 to Landt et al discloses a tunable filter. U.S. Patent 3,544,903 to Sakamoto presents a tuner with variable inductor band changing. U.S. Patent 3,400,345 to Oloff uses first and second inductors in a tuning selection system. U.S. Patent 3,252,096 to Carlson provides a multiband tunable circuit. U.S. Patents 2,796,524 and 2,549,789 to Ferrill present a circuit capable of being tuned through a plurality of frequency bands by means of selectable coils U.S. Patent 2,531,312 to Van Loon uses first and second inductors in an [inductors]. oscillator circuit. U.S. Patent 2,464,557 to Crockett shows a band switching arrangement having first and second inductors. U.S. Patent 2,140,770 to Schofield uses first and second inductors to define plural resonant frequency bands

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick G. Wamsley whose telephone number is (571) 272-1814. The official facsimile number is (703) 872-9306.
